Sulfadoxine-pyrimethamine (SP) has been shown to be highly effective for the treatment of uncomplicated falciparum malaria in adults and children. Resistance to SP is an emerging problem in some parts of Africa. Quinine remains the drug of choice for severe malaria. At present, SP is the drug of choice for treating uncomplicated falciparum malaria, including in pregnant women. Because of problems in obtaining and administering mefloquine, SP should remain the drug of choice for treating uncomplicated falciparum malaria in countries where the problem of mefloquine resistance is minimal.Protecting All Trans People: Simple Ideas for an Invasive Hospital There are many ways that the medical establishment can protect transgender people from exposure to unwanted, invasive treatment and inquiry. Medical care may be refused under common law by anyone, regardless of financial need. What is reasonable care must be decided as a matter of law, not medicine. Courts are not medically expert, and will find it very difficult to deny coverage on the basis of medical opinion alone. As noted by medical journalist JoAnn Harris, "Worse still, the courts can't tell the difference between the medical opinions of an experienced physician and those of a self-appointed 'expert' who is only spreading his or her self-serving medical opinion." Autonomy—the right to make one's own decision—is absolutely integral to the health of all people, and when it comes to medical care it is a crucial right. It is also a right that transgender people, 82138339de
